## PATIENT OVERVIEW

Marcus Client is an adult patient of unknown age and gender. The primary reason for recent evaluation appears to be symptoms consistent with gastritis, as well as reported sadness/depression.

## CURRENT CONDITION

Patient is currently stable. Latest vital signs are within normal limits: BP 122/78, HR 68, Temp 98.2°F, O2 saturation 99%. Patient reported stomach pain, described as burning after meals, bloating, and mild nausea as of 2025-10-16. Denied vomiting, blood in stool, or weight loss.

## ACTIVE PROBLEMS

\* Gastritis (diagnosed 2025-10-16) \* Depression/Sadness (reported 2025-10-14) \* Childhood Asthma \* History of Cholecystectomy (2012)

## RECENT CHANGES (24-48 HRS)

On 2025-10-16, the patient reported a one-week history of stomach pain (burning sensation post-meals), bloating, and mild nausea, leading to an assessment of Gastritis. No other significant changes within the last 24-48 hours are documented.

## PENDING TASKS

No outstanding orders, tests, or procedures are documented at this time.

## ■■■ IMPORTANT ALERTS

\* Allergies: Penicillin, Aspirin, Seasonal Pollen. \* Past Medical History: Cholecystectomy (2012), Childhood Asthma.

## CARE PLAN

\* Gastritis Management: Continue to monitor for gastrointestinal symptoms (pain, nausea, bloating). Assess pain level and provide comfort measures as needed. Educate on dietary modifications (e.g., bland diet, avoid spicy/acidic foods, caffeine, alcohol) to mitigate symptoms. \* Mood/Depression: Monitor patient's mood and emotional state. Assess for any signs of worsening sadness or depression. Consider initiating a mental health consult if not already in place, or if symptoms persist/worsen. \* General: Continue routine vital sign monitoring. Ensure patient comfort and safety.

## FAMILY COMMUNICATION

No specific information regarding family involvement or communication needs is provided at this time.

## ADDITIONAL NOTES

Patient requested pain medication at 2pm

## SPECIAL INSTRUCTIONS

Monitor vitals every 2 hours
